00131-5410-72	Vimpat 10 mg/ml solution	180	Y

* NDCs utilized here are either CVS' preferred NDCs (purple highlighted in RxConnect) or are the first/only one that shows up when manually searching for a drug. If you receive a different/ non-preferred NDC the BUD may be different and you'll have to check manually.

** The RxConnect warning column indicates if an alert will show in the legacy F3 Drug info screen in RxConnect, these warnings *should* still appear during production, however the newer Rx/iO drug info screen does not display any such package warnings at all currently.

*** Drug manufacturer states to **not** repackage into an amber vial and to dispense in original stock bottle only, so the BUD in this case matters more to the patient than for our own inventory purposes

Storage and Expiration Guidance – Zituvio/Zituvimet XR (and generics)

Zituvio and Zituvimet XR products (along with associated generics) manufactured by Zydus pharmaceuticals have unique storage/dispensing requirements. Zituvio (sitagliptin) and generics must be used within 6 months after the manufacturer stock bottle has been opened. Zituvimet XR (sitagliptin/metformin ER) and generics must be dispensed in the original container and, once opened, used within 1 month of opening.

NDC	Label Name	Dispense in Original Container?	Use Within After Opening Stock Bottle

When dispensing Prednisone Intensol:

- Dispense in the sealed, original manufacturer container with the calibrated syringe provided.
- RxConnect will default to a 3-month expiration date.

When dispensing Auvelity (all strengths):

- Must dispense in the sealed, original manufacturer container only.
- Never open a manufacturer container or place product in an amber vial.

When dispensing Rufinamide/Banzel oral suspension (all concentrations):

- Dispense in the sealed, original manufacturer container with the calibrated dosing syringe provided, whenever possible.
- If opening a sealed stock bottle, a 3-month expiration date must be written on the outside of the bottle.
- If dispensing out of an already opened stock bottle, review the expiration date written on the package and update the expiration date on the fill in RxC accordingly. If no expiration date is written on the bottle, the bottle must be removed from inventory, quarantined, and processed to non-saleable returns.
- RxConnect will default to a 3-month expiration date.

When dispensing Baclofen/Fleqsuvy oral suspension (all concentrations):

- If opening a sealed stock bottle, a 2-month expiration date must be written on the outside of the bottle.
- If dispensing out of an already opened stock bottle, review the expiration date written on the package and update the expiration date on the fill in RxC accordingly. If no expiration date is written on the bottle, the bottle must be removed from inventory, quarantined, and processed to non-saleable returns.
- RxConnect will default to a 2-month expiration date.

Review all manufacturer stock bottles for the above products:

- If a stock bottle is opened and does NOT have an opened/beyond-use date, it must be pulled from the shelf, quarantined, and processed through non-saleable returns via CFRx.
- If a stock bottle is opened and has an opened/beyond-use date, ensure that the beyond-use date is correct based upon the provided information. If not, or if it cannot be verified , the product must be pulled from the shelf, quarantined, and processed through non-saleable returns via CFRx.

Review all RTS amber vials/liquid bottles for the items listed:

- All amber vials for the products above should be immediately removed from inventory and processed to StrongPak via the non-saleable return application in CFRx.
- Remove any expired products from inventory and process to StrongPak.
